

Some additional information regarding high-risk patients:

These are the guidelines that have been laid out by the **BC Dental Association, College of Dental Surgeons of British Columbia** and the **College of Dental Hygienists of British Columbia**. They are based on requirements and standards set out by **WorkSafeBC** and **BCCDC**.

“Patients considered high risk for severe COVID-19 include those with pre-existing conditions such as serious respiratory disease, serious heart conditions, immunocompromised conditions, severe obesity, diabetes, chronic kidney disease or those undergoing dialysis, and liver disease; pregnant patients; and patients who are 70 years and over. These patients should be deferred whenever possible.”

Taken from the document: Transitioning Oral Healthcare to Phase 2 of the COVID-19 response Plan - May 15, 2020

This document is based on the latest available best practice and scientific evidence about this emerging disease and may change as new information becomes available.

At this time, we will not be able to see patients with these risk factors for routine treatment.
